

**Flash files (no lower than Flash Player version 7)**

-

When submitting flash files, please be sure to implement the **Click Tag variable** in place of the click URL (see directions below).

-

**How to Embed Click Tags**

Open or create a new Flash document. Set the file to Actionscript 2.0. If you are using an existing Flash file, go to File > Publish Settings and make sure it's set to Actionscript 2.0.

Insert a new layer at the top of your file and name it clickTAG. This must be the topmost layer in your file.

Create a button symbol over the entire canvas and name it "clicktag." Set the alpha transparency of the symbol to 0% so that the button is invisible.

Open the Actions panel (Window > Actions).

Select the clicktag button symbol on the canvas. You should see it selected in your timeline. In the Actions panel, paste the following code:

```
on (release) {  
  getURL(_level0.clickTAG, "_blank");  
}
```

Save and publish
